PORTFOLIO-SITE

PROFESSIONAL SUMMARY:

Software Engineer with 3 years of experience designing and building backend services, RESTful APIs, internal developer platforms, and database-driven architectures using Java, Go, and PostgreSQL. Experienced in developing modular, maintainable software systems across enterprise retail platforms (WMS, POS, Central Admin), implementing clean layered architecture, and managing asynchronous batch workflows. Backed by an engineering foundation in CI/CD pipeline automation, system debugging, and performance benchmarking (k6), with an innate focus on building robust, high-reliability backend products. Currently pursuing an MCA from IIT Patna.

SKILLS

Languages – Java, Golang, JavaScript, SQL, Bash
Frameworks – React, AngularJS, Spring Boot, TestNG, REST Assured,
Backend & API Engineering: RESTful API Design, HTTP Semantics, Layered Architecture, Concurrency Basics, Microservices
Databases & Storage: PostgreSQL, MySQL, Redis, MongoDB
Reliability & Performance: k6, REST Assured, TestNG, Selenium, Appium
Tools – Docker, Jenkins, GitHub Actions, Postman, Maven, Linux,

EXPERIENCE

Software Engineer at Medkart — Feb 2026- Present

- Engineered and delivered the backend for an in-house testcase management platform, designing REST APIs, metadata models, and automated CI/CD integration layers to streamline team deployment cycles.
- Built and maintained core backend workflows and data validation pipelines across enterprise retail products including Warehouse Management Systems (WMS), Point of Sale (POS), and Central Admin portals.
- Architected high-throughput REST API integration suites and k6 concurrency stress testing frameworks, benchmarking throughput limits and latency percentiles under simulated peak retail traffic.
- Integrated deep PostgreSQL and MySQL database validations, verifying transactional integrity, schema constraints, and database state transitions for billing, inventory, and loyalty services.
- Developed asynchronous polling and monitoring mechanisms to trace long-running background workers, scheduled cron queues, and inter-service state updates.
- Collaborated with engineering teams across Laravel/PHP microservices to trace API errors, isolate concurrency bottlenecks, and conduct root cause debugging in production-like staging environments.
- Spearheaded automated CI/CD quality gates and deployment pipelines in Jenkins, managing sprint releases and engineering deliverables.

SDET-1 at Bhanix Finance and Investment Limited — Dec 2024- Feb 2026

- Architected scalable Java-based automation platforms and execution engines with thread-safe multi-threading, automating 2,000+ complex fintech user workflows across web and mobile.
- Built end-to-end API and database integration suites connecting UI workflows with backend REST APIs and MySQL transaction ledgers for loan origination, KYC, credit evaluation, and repayments.
- Optimized test execution runtime by 55% through parallel worker threads and streamlined synchronization strategies.
- Validated transactional accuracy and data integrity across EMI calculations and loan ledger transitions via automated database assertion hooks.
- Automated CI/CD delivery pipelines in Jenkins, integrating Allure and ExtentReports dashboards to ensure immediate feedback on backend regression builds.

Assistant Manager at Jio Platforms Limited — Oct 2023 - Dec 2024

- Developed and deployed an internal reporting portal using React, JavaScript, and Chart.js to ingest, parse, and visualize historical execution telemetry into real-time analytical dashboards.
- Automated 100% of critical consumer journeys for Jio.com using Robot Framework and Selenium, establishing reliable automated release gates.
- Authored Bash automation scripts for server configuration and environment setup, eliminating manual operational overhead and accelerating pipeline runtime by 30%.
- Partnered with cross-functional development squads to review API specifications, system architecture, and anticipate edge-case failure modes early in the development lifecycle.

Internship at Cashe Jun 2022 - Nov 2022

- Contributed to the creation of the company training portal.
- Worked with a variety of different languages, platforms, frameworks, CMS such as CSS, PHP, JavaScript, AngularJS, JQuery, WordPress.

EDUCATION

Degree/Exam	Institute	Score	Year
BCA	Acropolis Institute of Management Studies and Research, Indore	7.9/10	2020-23
HSC	St. Vincent Pallotti Higher Secondary School	73%	2019-20
SSC	St. Vincent Pallotti Higher Secondary School	77%	2017-18
